EasySave's user documentation

EasySave 1.0 is a software application for creating backup jobs, with a console interface. The application is launched via the **EasySave.exe** runtime file.

When the application opens, you must select your preferred language by typing 1 for French and 2 for English.

You will then be presented with a menu:

```
1. Créer une tâche de sauvegarde
2. Voir les tâches de sauvegarde
3. Modifier une tâche de sauvegarde
4. Supprimer une tâche de sauvegarde
5. Exécuter la sauvegarde
6. Exécuter toutes les sauvegardes
7. Quitter
```

Create a backup

1. To create a backup job, enter the following information:

- Name of desired backup

- Source path

- Destination path

- Type: Full or Differential (A full backup will copy every files / folder while a differential one compares itself to a full and copy only modified files).

View backups

2. This function is used to view existing backup jobs.

Modify a backup

3. Use this function to modify the information entered for a given backup.

Delete a backup

4. This function is used to delete a specific backup job by entering its index (available in function 2.).

Run one or more backups

5. This function is used to execute the desired backup job.

6. This function executes all the backup jobs created.
